

IT'S YOUR TURN TO GROSS YOUR KIDS OUT TONIGHT.

Just tell them that
if they take meth,
all this can happen:
Nausea and vomiting,
diarrhea, hallucinations
(like thinking bugs are
crawling beneath your
skin), convulsions,
damaged blood vessels,
paranoia, violent
behavior, insomnia,
addiction, hyperthermia,
forgetting to eat and
sleep, weight loss,
malnutrition, rapid and
irregular heartbeat,
increased blood
pressure, stroke.
And yes, death.

METH KILLS. TELL YOUR KIDS.
